

# PATIENT AI RIGHTS *Initiative*

## AI is changing Healthcare

Our aim is to define standards and rules in health AI to advance the right to try, interests, and concerns of patient communities in health technology.

### 1 Patient-Led Governance

Patients should be central to creating AI healthcare rules and standards.

### 2 Independent Duty to Patients

AI in healthcare must be designed with a responsibility to prioritize patient welfare, mirroring the duty upheld by physicians.

### 3 Transparency

Patients must be informed when their data contributes to AI model development, when AI influences care decisions. When AI is used to determine treatment, evidence should be provided.

### 4 Self-Determination

Patients should have the option to choose or refuse AI interventions in their care.

### 5 Identity Security and Privacy

AI must ensure patient safety, privacy, and identity protection while respecting their choices.

### 6 Right of Action

Patients have the legal authority to prevent and rectify any harm caused by healthcare AI.

### 7 Shared Benefit

AI must first and foremost benefit those who are most at risk from its potential harms-patients.
